## 1.0 Test of Video Handler

### 1.0.0 Summary of testing

All of the tests for the video handler were manual (visual) tests.

### 1.0.1 Prerequisites

Video handler must be completed

### 1.0.2 Test importance

Low

### 1.0.3 Test results

Test Case	Expected Results	Obtained Results
Define a source file	Correct video is played with respect to the defined source file	Passed
Define a source file which doesn't exist	There should be no error thrown, simply no video is played	Passed
Define video location	Video is displayed at correct position on screen	Passed
Define video size	Video should appear on screen at the defined size and function normally	Failed – If set to be too small the control buttons are bigger than the video
Full screen	Video should play in full screen	Passed
Check that the video can be easily switched from full screen and non-full screen	Video should play in full screen and non-screen and be easy to switch between these views	Failed – If mouse is in area of non-full screen video when escape is pressed the controls do not function properly (they are still set as if it was being viewed in full screen)
Include multiple videos on one page	All videos should play as normal	Passed
Volume controls	Volume controls should intuitively control the volume of the video they are associated with	Passed
Progress bar	The progress bar should show the progress of the video it is associated with. User should be able	Passed

	<b>to skip to different parts of the video using the bar</b>	
<b>Check that the loop functionality works as required</b>	<b>If the loop variable is set to true the video should start again once it finishes</b>	<b>Passed</b>
<b>Check that the play/pause controls work</b>	<b>The play/pause button should do as intended and the label of the button should change accordingly</b>	<b>Failed – If the video is paused and then skipped forward using the progress bar the video plays and has incorrectly labelled button</b>
<b>Check that auto play works</b>	<b>If the auto play variable is true the video should play upon the window opening, without any input from the user</b>	<b>Passed</b>
