Test Report

1.0 Test of GUI

1.0.0 Summary of testing

In this document I will be giving the results of the tests carried out on our teach easy software. The part I will be testing is the templates part of the GUI.

1.0.1 Prerequisites

1.0.2 Test importance

This test is important as we would like the users to use as many templates as possible

1.0.3 Test results

Test Case	Expected Results	Obtained Results
A new template can be added to a lesson via the edit menu.	All new templates will be added without any failures	All new templates where able to be added to new pages But the templates are only added to new pages and not on the current page the user is on
Information Page template	Should have been able to drag text box off the screen and still be able to drag it back into the slide	Text goes off text box outline. When text box goes off the screen the outline is not present anymore. Therefore you cannot select it to drag it back onto the screen. (bug)
The new template can be edited to include information you desire	All new templates could be edited and information, other objects could be added	Templates could be edited and extra objects could be added
Check that all objects are correctly formatted in a template (Answer boxes, multiple choice boxes, images, videos, audio clips, text etc.)	All objects in the templates must be correctly formatted and can be edited appropriately	All objects could be edited and are formatted properly but image object I could not edit properly because it was giving an error message (Media could not be found) I have tested this with different image links.

Text box formatting	When long text is typed into the text editor and this text is displayed on the slide it should automatically move the overflow of text to the next line.	When text that's typed is displayed on the slide the overflow does not move to the next line automatically unless the user does this
