Test Report

1.0 Test of answer box handler

1.0.0 Summary of testing

This document outlines the tests undertaken to verify the answer box handler

1.0.1 Prerequisites

Answer box handler must be completed

1.0.2 Test importance

Mild

1.0.3 Test results

Test Case	Expected Results	Obtained Results
Define XStart and YStart	The answer box should be drawn at the correct location on the screen	Passed
Define character limit	The user should not be able to exceed the character limit	Failed – If the character limit is set to a negative number an error is thrown and there is no character limit
Define marks	Check that marks can be set and are only awarded for a correct answer	Passed
Define correct and incorrect answers answers	Only correct answers should be marked as correct, there should be variations of answers available (e.g. cat and kitten may both be correct)	Passed
Define a numerical answer	Same as above but correct answers should be given by a range	Failed – If isNumerical true - if correct answer is numerical an error is thrown no matter what I put as answer. If correct answer is a string it says invalid input no matter what answer I put in.
Set retry variable	If true the user should be able to retry the answer	Passed
Enter correct answer but in wrong case (upper/lower)	Answer should still be given as true	Passed
