## 1 Description

This document contains information about the company logo, application logo and GUI design versions, their purpose and states which are the currently used versions.

## 2 Currently Used Versions

The following application logos are similar to the previous versions (*section 3*) after being completely redrawn to fix scaling and clarity issues. The colours used are more vibrant, contrast between colours has improved and techniques used to create the logos make them look slightly more 'Hand drawn' (not all arch are 'computer perfect'. All current versions we produced using 'GIMP graphics software'.
