## **Planned vs Implemented Features**

A list of potential features for TeachEasy and LearnEasy were compiled by the Specialist Software Developer and forwarded to Company & Application Brand Designer / Assistant user Experience Designer for consideration. Tables 1 and 2 list in detail planned and implemented features for TeachEasy and LearnEasy respectively. Reason is also provided for unimplemented features.

<b>Planned Feature</b>	<b>Implemented</b>	<b>Reason</b>
Button that loads a guide on how to create a lesson	No	Feature unimplemented due to time constraints
Create a new lesson button	No	This feature is covered by enabling the user to create a new lesson using the standard File->open method
Open existing lesson button	No	Unimplemented due to time constraints.
List of recent lessons	No	Unimplemented due to time constraints.
Report a bug (through email)	No	Unimplemented due to time constraints.
Request a new feature (through email)	No	Considered unnecessary

Table 1. TeachEasy Planned vs Implemented

<b>Planned Feature</b>	<b>Implemented</b>	<b>Reason</b>
Open existing lesson button	No	Feature replaced with a feature which lists all the available lessons in the users default folder. The user can then simply click on the appropriate lesson to open it.
List of recent lessons (clickable)	Yes	

Table 2. LearnEasy Planned vs Implemented

Extending the capabilities of LearnEasy to list available lessons in the user's home folder as well as the list of recently opened file to TeachEasy is trivial. This is because the class that handles those features is independent of LearnEasy.
